

Press Release 12/09/2022

**Bruker Scientific is pleased to announce live FT-NIR demos over coffee in booth B8831 this year at IPPE.**

Bruker will have 3 unique systems at IPPE this year. Stop by the Bruker booth (B8831) and learn more about the newest NIR technology on the market, FT-NIR.

**TANGO FT-NIR Spectrometer** - Come see the #1 selling FT-NIR in Agriculture! With the easiest to use design, any operator can run a sample and have multiple nutritional results in 45 seconds. No preventative maintenance needed!

**MPA II: The FT-NIR Multi Purpose Analyzer**

This unique design can't be found anywhere else on the market. This "all-in-one" system runs not only meal samples, but also can give you full fatty acid profiles on oils and fats as well.

**MATRIX FT-NIR**

Inline testing? Operator shortage? No problem. This unique in-line system is the most popular selling inline system worldwide. With its multiplexing capabilities you can analyze up to six different points off one system, making an inline solution financially feasible even for the smallest mills.

Register here <https://l.ead.me/bdXL35> for demo and get entered to win an EMBER Smart Heated Mug! We are giving one away every day at IPPE 2023.
