RoboScan

Automated Pallet Scanning

Computerway Food Systems is excited to showcase our newest labor-saving innovation in automated pallet scanning at the Atlanta, GA IPPE 2022!

RoboScan automatically scans barcodes for an entire pallet of finished goods cases and generates a unique pallet label. This solution improves inventory and shipping operations by eliminating labor associated with pallet scanning and labeling. RoboScan can be used with robotically or manually stacked pallets and is integrated with the CFS R8 inventory management system.

- Reduce labor
- Track serialized case info
- Analytical performance data
- Minimal footprint
- Cycle time: 20-40 seconds
- 2-3x faster than shrink wrap machines

Computerway Food Systems (CFS) is a world leader in integrated plant floor and enterprise-level information systems designed specifically for food manufacturing, processing and handling operations.
