PRESS RELEASE

Pallet Built for Safety and Hygiene Is Perfect for Food & Pharmaceuticals

Craemer Hygienic TC3-5 Palgrip Plastic Pallet

Craemer Group, one of the premier providers of plastic pallets and storage and transport containers, has recently released the completely closed TC3-5 pallet that puts hygiene at the forefront. For absolute reliable load securing, the pallet is optionally available with a full-surface Palgrip anti-slip deck. Equipped with Palgrip®, the TC3-5 is up to meet all the challenges wherever hygiene is of utmost importance.

The completely closed, fully anti-slip coated top deck and the smooth lower deck of the TC-5 Palgrip boast excellent cleaning properties. In addition, the cavity- and rib-free construction of the robust and durable hygiene pallet offers reliable protection against contamination or water ingress. Its construction also ensures highest impact resistance, breaking strength and solid wall thickness. The unique Palgrip anti-slip coating, like the pallet itself, is made of high-quality polyethylene and is firmly bound to the pallet in a one-step production process.

Popular in the pharmaceutical, chemical and food industries, the structurally stable TC3-5 Palgrip pallet withstands temperatures from -22°F and 104°F and is equally suited for use on roller conveyors, chain conveyors and in automated high-rack warehouses. With only 52 pounds, the TC3-5 Palgrip boasts load capacities of 16,500 lb for static loads, 3,300 lb for dynamic loads, and 2,800 lb in racking systems. The load-bearing capacity on the shelf can be increased to up to 4,400 lbs, using integrated, corrosion-protected metal reinforcement rods, which are optionally available. Chamfered edges on both sides of the runners enable optimal use with fork-lift trucks. Thanks to the unique, full-surface Palgrip anti-slip top deck, the TC3-5 Palgrip offers total slip resistance, securing the load even in damp conditions or inclined positions. Craemer is the only manufacturer in the world that offers such a solution for the all-round reliable flow of logistics processes. On request, the hygiene pallet can also be equipped with RFID transponder.

Craemer Group at IPPE

The Germany-based Craemer Group, specialists in metal forming, plastics processing and tool making, was founded in 1912. Today, the internationally active family company has four European production sites and a global network of their own

sales offices including an operations facility in North America. In 2021, the world's leading manufacturer of plastic (intra-)logistics solutions achieved a total operating performance of 320 million USD with approximately 1,000 employees. Craemer will be presenting its TC3-5 Palgrip and other plastic pallets at IPPE (January 24 - 26, 2023) in Atlanta in hall BC, booth BC9951.
