FOR IMMEDIATE RELEASE

Durable and Reliable: Craemer Showcases Its Newest Pallets

Latest American Standard CR4-5 and TC3-5 Palgrip® On Display

(Palm Harbor, FL) Jan 17, 2022 - Craemer Group joins the International Production and Processing Expo in Atlanta, GA, from Jan. 25 - Jan. 27, and showcases its latest, high-quality plastic pallets that are leading the industry with their hygienic and long-lasting design.

Released in June 2021, the 48" x 40" American Standard CR4-5 is well-known for its sustainability and heavy-duty load capabilities. Capacities include 16,500 lb (7,500 kg) for static loads, 3,300 lb (1,500 kg) for dynamic loads, and 3,100 lb (1,400 kg) in racking systems. It's the ideal choice for handling heavy-duty loads in high rack warehouses or automated processes.

The structurally stable TC3-5 Palgrip® pallet is a popular choice in the pharmaceutical, chemical, and food industries. Made from polyethylene (PE) plastic, the TC3-5 Palgrip® is perfect for hygienic-first operations since both the top and bottom decks are completely closed. It's perfectly suited for use on roller conveyors, chain conveyors, and automated high-rack warehouses.

"Our pallets are more sturdy and stable than any pallet in the past," said Axel Breitzkreuz, President of Craemer US Corporation. "On top of that, the Palgrip® structure on the top deck ensures maximum safety. COVID-19 has proven the need to keep hygiene and safety a top priority within warehouses and workforces. Our pallets are safe to use and easy to clean."

The plastic pallets are 100% recyclable and have a longer lifespan than any other pallet in the market. The unique, full-surface anti-slip top deck of TC3-5 Palgrip® and Palgrip® strips of CR4-5 offer total slip resistance, securing the load even in humid or damp conditions and inclined positions.

Visit us at booth #BC9615. Businesses may qualify for a Craemer-funded trial. For more information, contact [Axel Breitzkreuz](#). To download pallet spec sheets, visit: <https://www.craemer.com/us/>.
