Added value for customers

Machinery and processing lines by KARL SCHNELL – Quality is our passion.

Since more than 70 years we develop and implement – together with our customers – simple, efficient and cost-effective solutions for both traditional and innovative products. Our approach is always the same: the customer, his demands and his products have always top priority.

A good example for such a realization are the multifunctional KS Process Automats. These universal machines are available in batch sizes from 30 to 1400 liters. They can be used as a "stand-alone machine" for delicatessen, as well as a central part of a continuous processing line in the large-scale production. KS Process Automats easily master also the most difficult cutting, mixing and emulsification processes with noticeable shortened batch times - and consequently reduced time and energy. The modular design and the high degree of automation ensure consistent product quality and allow the quick and appropriate implementation of customer requirements.

Equipped with numerous features, KS Process Automats are able to produce a variety of very different products - there is no other equipment necessary!

The high vertical range of manufacturing at KS guarantees that machines and equipment are from a single source – individually custom-tailored, reliable and with uncompromising quality – of course, Made in Germany.
