MEDIA ADVISORY

**Vision for a new industry standard
Spectra: foreign contaminant detection solution**

Quality in a new light

Featuring a multispectral sensing technology surpassing the human visual range, Spectra performs a double-sided surface fillet scanning, detecting and discarding every trace of plastic and other soft contaminants. A guarantee of consistent quality, Spectra is sure to set a new standard in its field. Gain a competitive edge and uniqueness in the eyes of brand owners by securing your version now and receiving it in the first months following its launch. See us at booth C-12315 to learn more.

Superior soft contaminant detection

- Superior detection capabilities
- Fully automated
- Minimizes recalls
- Ensures peace of mind
- Maximizes brand protection
- Promotes sustainability

A game-changing solution

Spectra comes with an impressive string of benefits. It will significantly reduce product recalls, claims, and related costs while providing brand protection and peace of mind. And as with every Marel innovation, it is designed to promote sustainability by making the most of our planet's precious resources.

A partnership of pioneers

Innovation has always been an integral element of our operations. For optimal results, we often choose to join forces with the global leader in a particular field. For the creation of Spectra, we are pleased to have partnered with TOMRA, the renowned expert in sensing and sorting technology that shares our values of innovation, unity, and excellence.
