Quality Technology International
Introduces CALSPORIN® Organic 2G

Available now from QTI is a new organic version of a direct fed microbial based upon the research-proven CALSPORIN® all-natural patented *Bacillus subtilis* (C-3102). CALSPORIN® Organic 2G gives organic poultry producers a helpful new and natural OMRI-Listed product to combat harmful organisms.

This DFM has been shown in hundreds of global research studies to increase beneficial gut organisms like *Lactobacillus* and *Bifidobacterium*, that in turn help reduce harmful organisms such as *Enterobacteriaceae*, *Salmonella*, and *Clostridium perfringens*. It is considered a GRAS organism.

*Bacillus subtilis* has the ability to form a tough protective endospore, allowing this organism to tolerate extreme environmental conditions. The patented CALSPORIN® C-3102 strain is unique from others commercially available and is able to withstand feed processing up to 194 degrees Fahrenheit.

Also available from QTI are CALSPORIN® BS3N, CALSPORIN® 2.0B, CALSPORIN® 1.0B and CALSPORIN® 10.

Quality Technology International will be at IPPE in Hall C, Booth 10459.

About Quality Technology International
QTI is a leader in providing natural gut health products for conventional, organic, or ABF production. For more information, contact Quality Technology International at 847-649-9300, or by emailing info@QTItech.com
